Please review our company fact sheets and add any information that would better describe the processes at the EtO facilities.

Okay...the NATA rollout is still on for August 22th. ATSDR in R5 is planning to release their letter consult on the R5 sampling done in suburban Chicago on August 21. (do not share this!). The early NATA rollout is to coincide with a Regional office's local issue. (Say this!)

Top level messaging will be shared with ROs by Monday. Here are the basics:

- What is EtO?—a sterilant and an industrial raw material
- NATA is a screening level tool...not an indicator of absolute risk
- What to do about elevated risks?
 - Look to regulatory programs to reduce these emissions, but it could take time, so
 - Don't want to wait in some cases—gathering additional information to understand individual assessment of locations; may take action sooner.

Any questions, Mike Koerber is the contact.

Cecil would like a briefing next Tuesday to find out what we know about our facilities. I told him that Dave should be back by then and that Jessie will be in the office to hold the fort during the rollout. I can always be reached at the MARAMA meeting. I will also be in the office on Monday to further discuss.

Have a good weekend!

Alice
